

PUMP UP

AND IMPROVE SERVICE AND COMPLIANCE

*Imagine if . . .
you could react in real time to
Pharmacy Authorization Requests . . .*

...maintain ongoing visibility...cut the approval cycle time by more than 50%.....
have a complete audit trail of time and actions taken for 100% compliance with Medicare Part D, HIPAA and State Regulations....
extend automation externally for self-servicing and increase market share as well as retain providers.

The Trivium Health Pharmacy Authorization Processing solution, built on the IBM FileNet platform, streamlines approval processes and puts real time management at your fingertips so that you can eliminate the tedious and time consuming routing of documents through the approval cycles.

Information can be securely processed in 4-7 minutes rather than double that amount of time it typically takes with a manual process.

Approvals processed by an individual per day can increase from 20 to 50!

With Trivium Health's Pharmacy Authorization Processing solution, you can:

- Provide a base set of rules and a platform that can be maintained by the business unit.
- Integrate and manage all decision supporting documents including unstructured information such as faxes, letters and XML documents.
- Track obligations based on multiple criteria such as Medicare Part D and request more information automatically based on deliverables and event triggers.

To learn more how you can improve customer service and reduce compliance risk all while reducing medical and administrative costs, take ten minutes for a consultative conversation with:
